Re: Cosmetic Fragrance Allergens

Product: 485, METHYL OCTINE CARBONATE

Quantitative analysis has not been performed for METHYL OCTINE CARBONATE (BRI 485) using EN 16274:2021 (SCCS/1459/11) for 64 fragrance allergens in Methyl Octine Carbonate.

The material itself is heavily restricted for use per IFRA. It's use levels and restrictions are so limited that the 64 fragrance allergens detected in the validated method would not impact the fragrance safety application of this material in industry.

However, for your records, there is a known correlation or relation to the fragrance allergen Methyl 2-Octynoate (CAS# 111-12-6). Bedoukian QC will report and limit this impurity to a maximum content of 0.25% (2500ppm) in each manufactured lot.

Please reference current IFRA restriction documents for this fragrance material.
